A REPORT TO THE IOWA DEPARTMENT OF NATURAL RESOURCES

Understanding the Usage Patterns and Most Desirable Characteristics of Iowa's Rivers and Streams¹

Yongjie Ji, Joseph Herriges, and Catherine Kling

October 2010

Iowa has an extensive network of rivers and streams running through all geographic regions of the state. Simple observation suggests that these water bodies are used for recreation and enjoyment by many of Iowa's citizens. A number of surveys have been done to quantify the usage of specific rivers and streams or by specific groups of users, but a representative statewide characterization of the pattern of usage by all of Iowa's citizens has not previously been undertaken. Thus, little has been understood about the overall pattern of river usage by Iowa's citizens, including which aspects of rivers and streams are of most direct interest to the state's residents, and how conservation expenditures could be used most cost-effectively to improve the outdoor recreation experience of Iowans visiting these resources. The purpose of the Iowa Rivers Usage and Valuation Project is to provide Iowa's citizens and policymakers with information that can be used to support wise decisions regarding the state's natural resources.

To provide this information, researchers from the Iowa State University Department of Economics and Center for Agricultural and Rural Development, with funding from the Iowa Department of Natural Resources and the U.S. Environmental Protection Agency, conducted a large random population survey of Iowans, collecting information from survey respondents about their pattern of river and stream usage as well as answers to a series of questions concerning their preferences regarding river and stream recreation. The survey was titled "Iowa Rivers and River Corridors Survey—2009." Survey findings should provide important insight for discussions

¹Although the research described in this report has been funded in part by the United States Environmental Protection Agency through R83426001, it has not been subject to the Agency's required peer review policy and therefore does not necessarily reflect the views of the Agency and no official endorsement should be inferred.

concerning prioritization of streams for protection and restoration; the economic and health benefits of river recreation to Iowans and local communities; the implementation of TMDL regulations; watershed-level discussions concerning land use; and the assessment of water quality regulations at the local, watershed, and state levels. A complete copy of the survey can be found in the appendix of this document and online at http://www.card.iastate.edu/environment/nonmarket_valuation/iowa_rivers/. In the remainder of this report, we summarize the data and initial findings from this survey.

Survey Design and Implementation

The Iowa Rivers and River Corridors Survey—2009 was divided into three sections. In the first section, respondents were asked about their individual river visitation patterns during the 2009 calendar year. Respondents were asked to report the number of trips (including multi-day trips) to the 73 river segments in Table 1, identified by the Iowa Department of Natural Resources, and were provided with a map (Figure 1) showing the names and locations of the rivers and streams. Additionally, respondents who reported taking a positive number of trips in 2009 were also asked to indicate the activities they participated in during their visits by checking the relevant boxes from a list of possible options. The exact questions can be found in a copy of the final survey instrument included in the appendix.

In the second section, respondents were asked about their attitudes toward factors affecting their river visitation decisions using a five-point scale. In particular, they were asked about the importance of various river characteristics such as water quality and the facilities along the rivers in their selection of where to visit. A total of 30 identified factors were presented to respondents for their consideration. These factors can also be found in the survey sample in the appendix.

In the final section, demographic information was gathered from respondents. Information collected in this section includes age, gender, income, employment status, and family size, as well as whether the individual owned or rented a boat in 2009.

An initial survey design with each of these components was completed in early summer of 2009. Two focus group sessions were then conducted in late July and early

August to fine-tune the wording of the survey and to ensure that the questions and instructions were clear to potential survey respondents. Finally, a pre-test of the survey instrument was mailed to a random sample of 200 residents in September, as a further check on both the survey instrument and the implementation procedures.

After revising the survey instrument in response to the focus groups and the pre-test sample, the final survey was mailed to 10,000 randomly selected Iowa residents

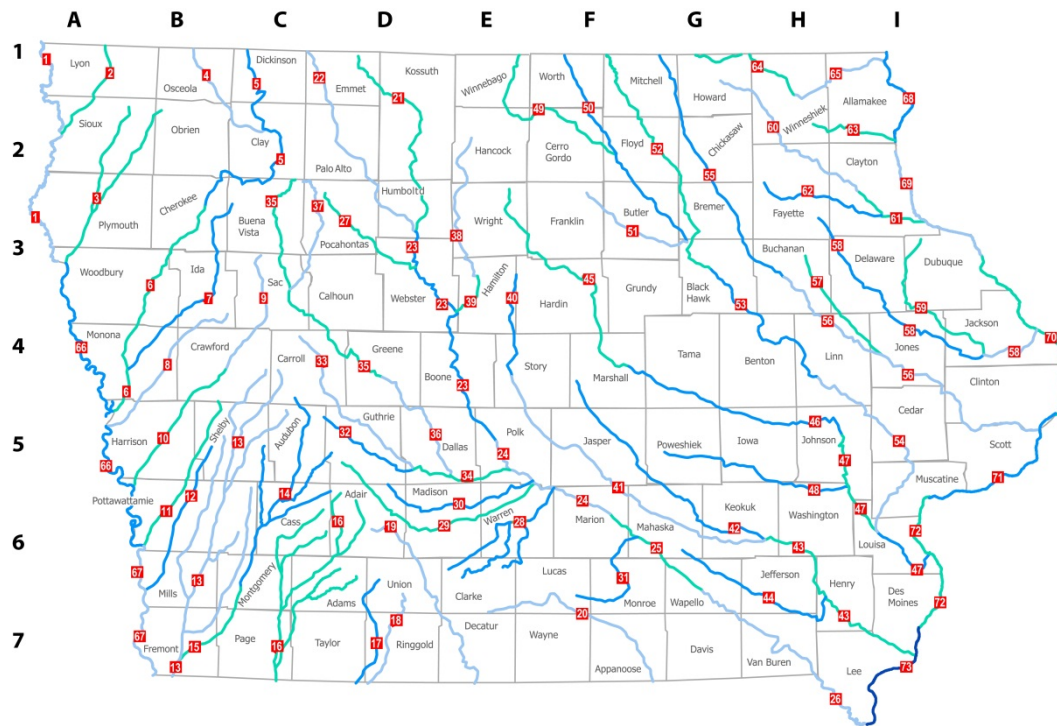

Figure 1. Iowa Map of River Sections

in November 2009.² Sample households were sent a packet that contained the survey, a map of the rivers and streams, a cover letter explaining the purpose and timeframe of the study, a self-addressed and stamped return envelope for the completed survey, and a payment slip. When respondents returned their survey with a copy of the payment slip completed, they were sent a check for \$10 as a partial compensation for their time. Respondents who did not return the survey within three weeks were sent a postcard reminder and if they still did not respond after another three to four weeks, they were sent a replacement packet containing the complete set of materials that were sent initially.

Of the 10,000 surveys sent out, 221 were undeliverable because the addressee was deceased or had moved. There were 4,778 respondents who chose to return the survey by mail, giving us a 49% response rate among deliverable surveys.

While the nearly 4,800 survey respondents provide valuable insights into river and stream usage in the state, one concern is that they may differ systematically from those

²The survey sample was obtained from Survey Sampling International, a commercial survey sample provider.

who did not return the survey and thus might provide an incomplete picture of Iowa residents. For example, respondents may be more avid visitors to the state's rivers and streams. This was the case for an earlier survey of Iowa lake usage, in which a follow-up telephone survey of non-respondents found that they took almost half as many trips to lakes in the state when compared to mail survey respondents. Subsequent aggregate lake usage figures had to be adjusted to correct for the non-response bias. To investigate this problem in the case of the rivers survey, a random sample of non-respondents were contacted by phone and asked about their overall river and stream usage. The response rate to this follow-up was just under 50%. Unlike the lake survey, however, non-respondents to the river and stream survey were not found to be less avid users, suggesting that a non-response correction is not necessary in this case.

Survey Results

Usage Information for Rivers and Streams in Iowa in 2009

On average, a large proportion of respondents in the survey report taking at least one trip during 2009 to any of 73 identified river and stream segments. Table 2 lists some basic summary statistics broken down by river segment.³ Approximately 48% of respondents report taking at least one trip to one of the identified segments. About 40% of respondents report taking a trip to at least one of the 64 interior river segments, and around 24% of respondents report taking a trip to at least one of the 9 border river segments.⁴ The average number of trips reported in the sample is approximately 6 per person to all the river segments, 2 per person to the 9 border river segments, and 4 per person to the 64 interior river segments, varying from some respondents taking no trips to others with the maximum allowed 52 trips.⁵ Among those who report a positive

³Appendix Tables A1 and A2 provide additional details. Table A1 lists the total number of trips associated with individuals who checked specific activity categories (e.g., fishing, hunting), while Table A2 indicates the mean numbers of trips to a segment among individuals who visited that segment and engaged in the specific activity category.

⁴River segments 1, and 66-73 are border river segments. River segments 1, 66, and 67 are along the Missouri River. River segments 68-73 are along the Mississippi River.

⁵Respondents who reported taking over 52 trips were dropped from the sample for purposes of computing these statistics (though not for other analysis). A major goal of this research is to estimate, as precisely as possible, the recreational usage of the rivers and streams by Iowans. Those who report usage of over one trip per week may be indicating that they live near or on a river or that their daily activities take them to a river or stream and therefore their reported trips are not strictly recreational in nature.

Note: Column 1 provides the mean trips to the segment averaged over the entire sample; Column 2 provides the mean trips among individuals that are trip takers (i.e., visiting at least one of the river or stream segments in 2009); and Column 3 indicates mean number of trips to the segment among visitors to that segment.

number of trips to any river segments, the average number of reported trips is just over 13.

Table 2 also identifies which river segments were the most popular among respondents. Column 4 indicates the percentage of respondents who visited a particular segment. The percentage of respondents reporting visits to a specific river segment varies from 0.12% for river segment 8 (Soldier River) to 7.23% for river segment 24 (i.e., Des Moines River from Saylorville Dam to Lake Red Rock). The average number of trips taken by respondents to a specific river segment varies from 2 trips per visitor for river segment 37 (Big Cedar Creek) to 7.63 trips per visitor for river segment 73 (i.e., along the Mississippi from Burlington to Keokuk).

Usage Information by Group

Table 3 contains summary statistics for river usage divided along various population segments, including age, gender, education, family size, number of children

^aAvg.Trip1: defined as trip/sample.^bAvg.Trip2: defined as trip/trip-taker.^cBoat Ownership1 = 1 if the individual owned, borrowed, or rented any type of boat in 2009; = 0 otherwise.^dBoat Ownership2 = 1 if the individual borrowed or rented any type of boat in 2009; = 2 if the individual owned a boat in 2009; = 0 otherwise.

in the family, employment status, income, and boat ownership.⁶ Among all the age groups, respondents younger than 25 report the highest percentage of river visitation (71.7%) while seniors (respondents over age 60) report the lowest. Other age groups have similar percentages of river visitation (i.e., around 55%). Though there are substantial differences in visitation rates across all age groups, the average number of river trips for trip takers within each group is quite similar and ranges from 11 to 13.8. It is important to note, however, that these age categorizations relate to the individual responding to the survey.

As the second categorization in Table 3 indicates, male respondents report a higher percentage of river visitations (53%) compared with female respondents (38%). More educated respondents are more likely to visit rivers, with about 52% of respondents with advanced education reporting that they visited at least one segment in 2009, while only about 32% with less than a high school education report taking at least one trip. However, the numbers of trips per visitor are almost the same, around 13, regardless of education level. Families with three or more adults have a higher river visitation rate and higher numbers of trips per visitor compared with small families. Families without children have a smaller river visitation rate (34%) and families with children report a higher number (60% for families having one child, 67% for families having two children, 57.2% for families having three or more children).

In terms of employment status, respondents who work full time report a slightly higher visitation rate than unemployed respondents (57% vs. 52%). Lower income groups tend to have lower river visitation rates compared with other income groups. Finally, those respondents who have owned or borrowed/rented a boat, either a fishing boat or a motor boat, report a substantially higher river visitation rate than others (approximately 72% vs. 34%).

Activities Enjoyed by River Visitors

To collect information on activities undertaken by Iowans on rivers or in river corridors, we identified 10 general activity categories that visitors might engage in:

⁶Appendix Tables A3 and A4 provide supplemental information along these lines. Table A3 summarizes total trips for individuals checking specific activity categories for each segment of the population. Table A4 summarizes the mean number of trips involving a specific activity for each segment of the population.

fishing, hunting, boating, canoeing, swimming, using trails, camping, relaxing, wildlife viewing, or other. The definition of these activities was provided on the survey. Table 4 lists the percentage of trips involving the 10 activities by river segment.⁷ Overall, respondents report that 52% of their river trips involve relaxation, 44% involve fishing, 40% include trail-related activities, and 44% involve wildlife watching. Percentages for the remaining activities, listed in decreasing order, are boating (21%), swimming (21%), camping (18%), canoeing (12%), and hunting (12%). Breaking down the activity statistics by interior river segments and border river segments, border river visitors are more likely to engage in boating activities (37% vs. 14%) and interior river visitors are more involved in the hunting and canoeing activities (14% vs. 6% for hunting and 15% vs. 4% for canoeing).

Table 4 clearly indicates that there is substantial variation in the activities undertaken on different river segments. For example, visitors to river segment 12 (Keg Creek) report no fishing-related trips, while visitors to river segment 8 (Soldier River) report fishing on almost 83% of their trips. Likewise, for hunting, visitors to river segments 37 (Big Cedar Creek in Pocahontas County), 44 (Big Cedar Creek in Jefferson County) and 63 (Yellow River) report no hunting trips to these segments, whereas visitors to river segment 12 (Keg Creek) report the highest percentage of hunting trips (49%). This variability is also true of activities relating to boating or canoeing on the rivers. For boating, visitors to river segment 17 (Platte River) report the highest percentage of boating trips (48%). In contrast, there are more than a dozen river segments with reported trips that do not involve any boating-related activities. Visitors to seven river segments report zero canoeing trips, whereas the highest percentage of canoeing trips (54%) occurs on river segment 64 (the Upper Iowa River above Decorah). There is considerable variation in the remaining activities across the segments listed in Table 4.

⁷Note that survey respondents were asked to provide the total number of trips to a river segment and to check the activities that they engaged in during their trips. They did not provide a breakdown of their activities for individual trips. In constructing the figures in Table 4, it was assumed that a checked activity was engaged in during *all* of the trips listed for a segment. While this is likely to overstate the total number of, say, fishing trips to a given river segment, it is less likely to impact the relative importance of the individual activities listed in Table 4.

Table 5 provides a summary of activities across all trips broken down by various segments of the population, including age, gender, education, family size, number of children in the family, employment status, income, and boat ownership. Dividing the respondents into six age groups, we find that the percentage of trips involving fishing, hunting, boating, canoeing, swimming, camping, and relaxing decreases as respondents become older. Senior visitors tend to visit rivers for wildlife watching. Male visitors are most likely to participate in fishing, hunting, boating, canoeing, camping, and relaxing during their river visits. Female visitors report more trips involving trail-related and relaxation activities.

Less-educated respondents are inclined to fish, hunt, boat, swim, and camp during their visits. In contrast, more-educated visitors report more trail and wildlife-watching related activities. Respondents coming from larger families report greater participation in virtually all of the listed activities, with the exception of relaxing and wildlife viewing. Full-time employees participate more often in hunting, boating, camping, and wildlife watching when compared with unemployed respondents. Wealthier respondents engage more in hunting, boating, and trail-related activities than do lower-income respondents. Finally, and not surprisingly, boat owners are more likely to engage in fishing, hunting, boating, canoeing, swimming, and camping related activities.

Typical River Trip Duration

Survey respondents were asked to report the typical length of their visits to the various river or stream segments. Figure 2 shows the distribution of three types of trips: half-day (or less), one-day, and two-day (or more) trips. The majority of respondents indicate that their typical trip lasts a half-day or less (65%), while only 8% of respondents report spending multiple days on their typical trips.⁸

Share of Time Spent on Nine Activities on a Typical River Trip

Respondents who reported taking at least one trip to an Iowa river or stream segment were asked to indicate how much time they spent on various activities. Figure 3 provides a breakdown of the time spent on activities on a typical trip reported by the

⁸Appendix Table A5 provides an additional breakdown of the typical trip duration for various population segments (e.g., age, gender).

^aBoat Ownership1 = 1 if the individual owned, borrowed, or rented any type of boat in 2009; = 0 otherwise.

^bBoat Ownership2 = 1 if the individual borrowed or rented any type of boat in 2009; = 2 if the individual owned a boat in 2009; = 0 otherwise.

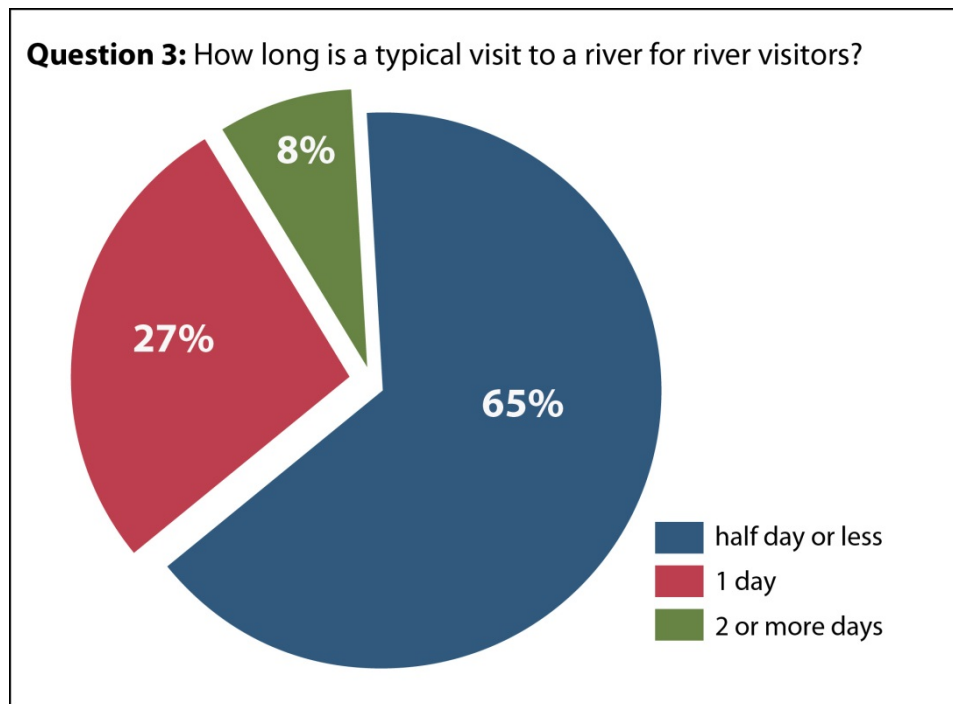

Figure 2. Typical Trip Duration

Figure 3. Share of Time Spent on Specific Activities on a Typical Trip

river visitors. On average, respondents report spending about 22% of their time fishing, 21% relaxing, 17% on trail-related activities and 9% on wildlife watching. These four activities are also the four most commonly undertaken activities reported by respondents in Table 4.

Table 6 provides a similar breakdown of trip activities for different demographic segments of the population. Although there is some variation in the share of time spent on different activities across the different population segments, fishing, relaxing, trail-related activities, and wildlife watching are consistently indicated to be the four most popular activities.

River Visitors' Other Activities In Addition To River Recreation

Figure 4 shows the nine activities most enjoyed by respondents in addition to their river recreation activities. Among 1,976 respondents who report visiting at least one river segment, nearly two-thirds report visiting friends as well (67%). Many visitors also report general sightseeing (65%), traveling scenic byways (53%), visiting historical areas (50%), attending festivals (45%), visiting museums (35%), shopping (31%), casino gambling (22%), and visiting ethnic attractions (13%).

Boat Ownership among Respondents

Figure 5 illustrates the percentage of respondents who owned, rented, or borrowed a boat in 2009. The ownership rates differ across the boat types and the three ownership categories. The share of respondents who own a fishing boat is the highest (13%) among the ownership categories. In the case of renting a boat, 4% of respondents report they rented a canoe, which is more than for any other type of boat.⁹

Factors Affecting River/Stream Selection

A wide variety of factors are likely to play a role in the river or stream segments individuals choose to visit. To gain a broad sense of the relative importance of these factors, respondents who went to *any* of the 73 river segments in 2009 were asked to allocate 100 "importance points" among five general site characteristics according to

⁹Figures A1.1 and A1.2 in the appendix provide a further breakdown of boat ownership by groups (i.e., non-river visitors and river visitors).

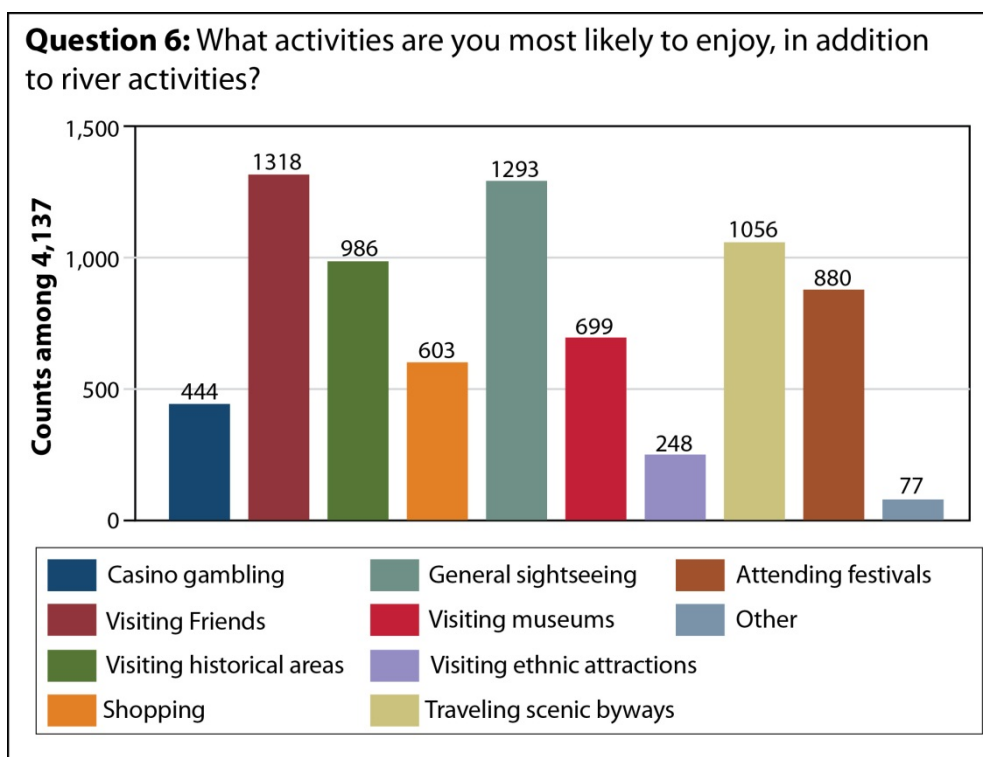

Figure 4. Activities Engaged In by Visitors Beyond River-Based Recreational Activities

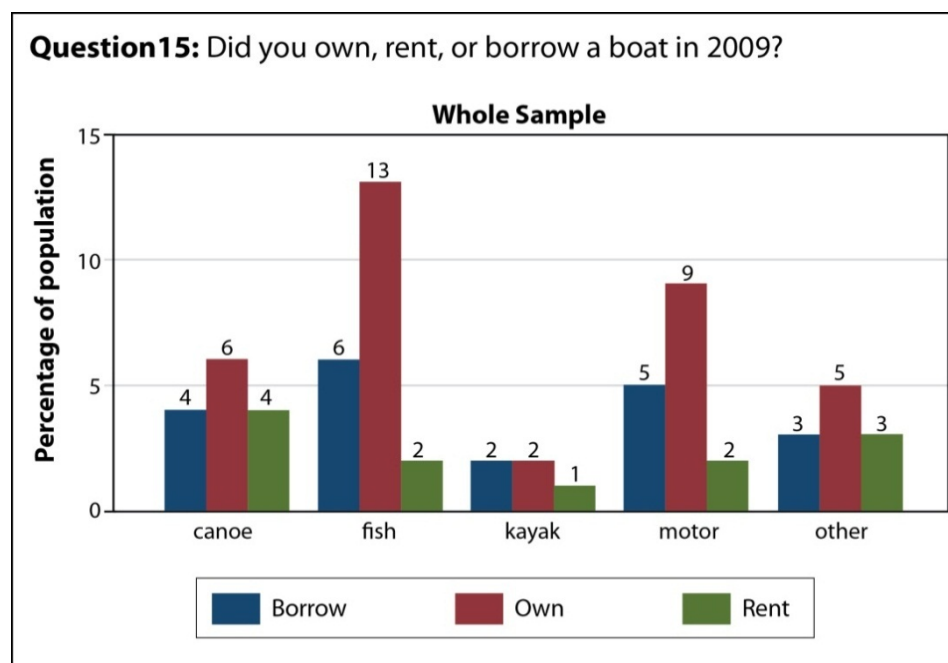

Figure 5. Boat Ownership among Survey Respondents

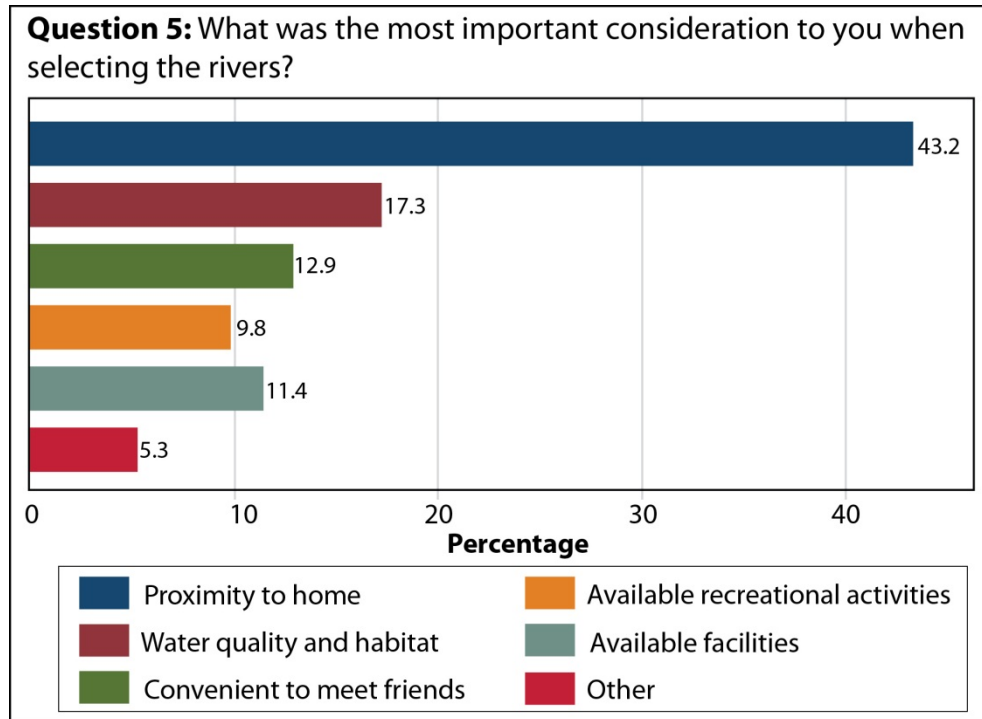

Figure 6. Importance Factors in Selecting Which Rivers/Streams to Visit

the role each characteristic played in selecting which river segment to visit: proximity to home, water quality and habitat, a convenient location to meet friends/relatives, available recreational activities (i.e., kayaking, biking, etc.), and available facilities (i.e., bathrooms, trails, boat ramps, etc.). Figure 6 summarizes the average ranking of these factors. Proximity to home is reported as the most important factor when people are choosing whether to visit a river or not. The second most important factor is water quality and habitat.¹⁰

In addition to indicating what general features were the most important in determining their choice of river segment, respondents were also asked to indicate their attitudes toward 30 more specific factors affecting river visitation decisions. Table 7 provides a list of these factors, along with summary statistics for the ranking scores for each of the factors. A five-point scale was used, where a “1” indicated that this factor would be a strongly negative consideration in selecting a river to visit, while a “5” would indicate that the factor would be strongly positive consideration. Respondents

¹⁰Appendix Table A6 provides additional details regarding these importance point allocations, isolating the responses provided by different demographic segments of the population (e.g., age, gender).

Table 7. Ranking Factors Affecting Visit Decisions

	Mean Score	Attitudes				
		1	2	3	4	5
Straightened section of stream	2.4	435	333	2599	167	75
Curving stream with numerous bends	3	127	136	1949	939	474
Row crop agriculture visible along river banks	2.4	467	594	2133	291	124
Livestock agriculture visible along river banks (grazing, feedlots)	2.2	846	679	1664	277	137
Natural setting dominates river banks (forest, prairie, etc.)	3.6	76	53	843	1278	1401

Mostly residential areas visible	2	991	1040	1322	184	86
Stream section with possible bacterial contamination	1.5	2302	469	559	76	224
Stream section with possible sediment and nutrient contamination	1.7	1784	803	749	103	190
Stream section with abundant algae	1.7	1622	881	826	127	166
Stream with abundant game fish	3.4	124	84	1204	942	1277
Stream dominated by carp or other rough fish	2.2	644	944	1701	232	104
Nearby urban areas with places to eat, drink, and shop	2.9	297	327	1586	1043	419
Nearby lodging	2.8	296	250	1821	914	357
Stream section where water quality is safe for human contact	3.8	88	46	549	992	1986
Flowing stream section where there is no need to get around obstructions such as dams and fences	3.4	102	82	1303	1177	997
Stream section where the river is muddy	2	812	1362	1214	119	106
Stream section where the river smells unpleasant	1.5	2297	654	345	89	235
Stream with gently flowing water	3.3	65	68	1198	1595	666
Stream section where I expect to find historical sites	3.1	123	108	1616	1225	547
River section with adequate access for motorboats	2.7	291	400	1935	664	347
River section with adequate access for canoes, kayaks, and inner tubes	3	164	144	1740	1035	530
River section with adequate trail access (for hiking, biking, running, etc.)	3.3	126	125	1200	1287	905
Riverbanks lined with trash	1.3	2763	319	270	62	219
Adequate on-site facilities such as restrooms, shelters, and picnic facilities	3.3	103	145	1091	1429	888
River section with boat rental and/or shuttle service nearby	2.7	276	320	2113	693	219
Access points are located in cities or small towns	2.9	144	253	1926	993	313
Access points are located in rural areas	3	86	175	1963	1027	358
Stream segment in very remote or secluded rural settings	2.9	161	324	1706	951	480
River section where there is an established river trail route with available maps and signs for boaters, canoers, and kayakers	3.1	121	144	1673	1146	534

Notes: Attitude 1: Most negatively affecting; 3: Neutral; 5: Most positively affecting.
All mean scores are significantly different from 3.0 at the 5% level.

were told that a “3” indicated that it was a neutral factor. Based on the overall average scores, three factors are identified as the most positive factors in selecting a river segment to visit:

- water quality
- natural setting dominates (river banks, forest, prairie, etc.),
- stream with abundant game fish

On the other hand, three factors are identified as the most negative factors in choosing which river segment to visit:

- riverbanks lined with trash
- stream section with possible bacterial contamination
- stream section where the river smells unpleasant

Table 8 examines the top five most positive factors and the bottom five most negative factors for various segments of the survey sample.¹¹ For example, the second column contains the results for respondents who report taking at least one river trip, whereas the third column reports results for non-visitors. The other 11 population segments are based on whether the respondent reported participating in any given activity during their river visitations. For example, the fourth column is for those visitors who report participating in fishing, the fifth is for hunting, and so on. The ninth group is for those visitors who did *not* participate in swimming at any segment.

Interestingly, the five most negative factors are quite stable across the groups with the exception of respondents who fall into the fishing and/or hunting group. For the bulk of respondents, the most negative factors are the following:

- stream section with abundant algae
- stream section with possible sediment and nutrient contamination
- stream section with possible bacterial contamination
- stream section where the river smells unpleasant
- riverbanks lined with trash

Likewise, the five most positive factors are also quite stable across different groups:

- stream section where water quality is safe for human contact
- natural setting dominates river banks (such as forest, prairie, etc.)
- stream section with abundant game fish

¹¹Tables A7 and A8 in the appendix list the attitude scores and the rank of the 30 factors by various demographic segments of the population.

Table 8. Ranking Factors, by Group (top and bottom factors)

Factor	Visitor	Nonvisitor	Fish	Hunting	Boating	Canoeing	Swimming	Non-Swimming	Trails	Camping	Relaxing	Wildlife	Other
Top 5	15	15	15	15	15	15	15	15	15	15	15	15	15

	24	24	24	24	24	24	24	24	24	24	24	24	24

- 5 Natural setting dominates river banks forest, prairie, etc.
- 6 Rock outcropping
- 7 Mostly residential areas visible
- 8 Stream section with possible bacterial contamination
- 9 Stream section with possible sediment and nutrient contamination
- 10 Stream section with abundant algae
- 11 Stream with abundant game fish
- 15 Stream section where water quality is safe for human contact
- 16 Flowing stream section where there is no need to get around obstructions such as dams and fences
- 18 Stream section where the river smells unpleasant
- 19 Stream with gently flowing water
- 21 River section with adequate access for motorboats
- 22 River section with adequate access for canoes, kayaks, and inner tubes
- 23 River section with adequate trail access (for hiking, biking, running, etc.)
- 24 Riverbanks lined with trash
- 25 Adequate on-site facilities such as restrooms, shelters, and picnic facilities
- 27 Access points are located in cities or small towns
- 29 Stream segment in very remote or secluded rural settings

- flowing stream section where there is no need to get around obstructions such as dams and fences
- rock outcroppings

These results suggest that Iowans' choices of which river segments to visit are heavily influenced by factors related to water quality on both the positive and negative side.

Conclusions

This report summarizes the key findings from a random population survey of Iowans designed to collect information about their river and stream usage as well as their preferences about various characteristics of river and stream corridors. The survey, titled "Iowa Rivers and River Corridors Survey—2009," provides a broad snapshot of where Iowans engage in river and stream use and the type of activities they undertake while onsite. It is hoped that this information can be used by citizens, policymakers, and other groups to inform decision making concerning prioritization of rivers and streams for protection and restoration and other decisions related to water quality.

APPENDIX B

Survey

Iowa Rivers & River Corridors Recreation

Survey - 2009

IOWA STATE UNIVERSITY
OF SCIENCE AND TECHNOLOGY

In order to make sound decisions concerning the future of Iowa rivers and streams, it is important to understand how the rivers and streams are used, as well as what factors influence your selection of rivers and streams to visit. The answers you give to the questions in this survey may be important in determining where investments may be made to protect, develop or restore rivers and streams. Even if you have not visited any rivers and streams in Iowa, please complete and return the questionnaire. It is critical to understand the characteristics and views of both those who use and those who do not use the rivers and streams.

In this first section, we would like to find out which of the river or stream segments on the enclosed map you visited and what you did there. A “visit” includes not only those times you entered the stream or river itself (swimming, canoeing, fishing, etc.), but also the times you spent right next to the river or stream (hiking, bicycling, bird watching, etc.). The lands right next to the rivers and streams are often referred to as the river and stream “corridors.”

If you have not visited any rivers or streams in Iowa this year please check this box and proceed to question 7 on page 9.

☐ I have not visited or plan to visit any rivers in Iowa this year.

- 1. Using the enclosed map, identify the river or stream segments (including the adjacent stream corridors) that you visited during 2009.** Once you have identified these stream(s) please mark with an “X” on the map the location where you *most often access* a river or stream. An approximate location is adequate.
- 2. Next, please tell us about all of your river/stream visits during the entirety of 2009. On the following tables on pages 4-7, please record the number of visits you made, or plan to make in the remainder of the year, and place a checkmark in each of the appropriate boxes to indicate the activities you undertook or plan to undertake.** (Please count as a “visit” any trip you took for the purpose of viewing or using the river. Also, if you go out of your way to bike, walk, etc. along the river, include that as a trip as well.)

Please check all that apply

River segment ID	Major river or tributary label	Total number of trips in 2009	Fishing	Hunting or trapping	Boating with motor, water skiing	Canoeing or kayaking	Swimming, tubing or playing in water	Use of trails for hiking, biking, XC-skiing, etc.	Camping	Relaxing, picnicking	Wildlife/ bird watching	Other

3. How long is your typical visit to a river?

- ☐ half-day or less ☐ 1 day ☐ 2 or more days

4. On your typical visit, what percentage of your time do you spend on the following activities?

- _____ Fishing
_____ Hunting or trapping
_____ Boating with motor, water skiing
_____ Canoeing or kayaking
_____ Swimming, tubing, or playing in water
_____ Use of trails for hiking, biking, XC-skiing, etc.
_____ Camping
_____ Relaxing, picnicking
_____ Wildlife/bird watching
100%

5. What was most important to you when SELECTING the rivers and/or streams you have visited this past year? In particular, if you were given 100 points to distribute according to what is most important for choosing a river or stream to visit, how would you distribute them? To indicate one item is more important to you than another, you should allocate more points to it. You do not need to give points to all of the items, but remember that the total needs to equal 100.

- _____ Proximity to home
_____ Water quality and habitat
_____ A convenient location to meet friends/relatives
_____ Available recreational activities (i.e., kayaking, biking, etc.)
_____ Available facilities (i.e., bathrooms, trails, boat ramps, etc.)
_____ Other (describe _____)
100 pts.

6. In addition to our river/river corridor activities, which of these other activities are you most likely to enjoy:

- | | |
|---|---|
| <input type="checkbox"/> Casino gambling | <input type="checkbox"/> Visit museums |
| <input type="checkbox"/> Visit friends/family | <input type="checkbox"/> Visit ethnic attractions |
| <input type="checkbox"/> Visit historical areas | <input type="checkbox"/> Travel scenic byways |
| <input type="checkbox"/> Shopping | <input type="checkbox"/> Attend festivals/events |
| <input type="checkbox"/> General sightseeing | <input type="checkbox"/> None |

7. How do you decide whether to visit rivers and/or where to go? Rank how each of the following factors affect whether you visit rivers and streams and your decisions about which river or stream segment you use.

	Most negatively affecting			Most positively affecting	
Straightened section of stream	1	2	3	4	5
A curving stream with numerous bends	1	2	3	4	5
Row Crop Agriculture visible along river banks (fields, pasture, etc.)	1	2	3	4	5
Livestock Agriculture visible along river banks (grazing, feedlots)					
Natural setting dominates river banks (forest, prairie, etc.)	1	2	3	4	5
Rock outcroppings	1	2	3	4	5
Mostly residential areas visible	1	2	3	4	5
Stream section with possible bacterial contamination	1	2	3	4	5
Stream section with possible sediment and nutrient contamination	1	2	3	4	5
Stream section with abundant algae	1	2	3	4	5
A stream with abundant game fish	1	2	3	4	5
A stream dominated by carp or other rough fish	1	2	3	4	5
Nearby urban areas with places to eat, drink, and shop	1	2	3	4	5
Nearby lodging	1	2	3	4	5
A stream section where water quality is safe for human contact	1	2	3	4	5
A flowing stream section where there is no need to get around obstructions such as dams and fences	1	2	3	4	5

Continued on next page

	Most negatively affecting			Most positively affecting	
A stream section where the river is muddy	1	2	3	4	5
A stream section where the river smells unpleasant	1	2	3	4	5
A stream with gently flowing water	1	2	3	4	5
A stream section where I expect to find historical sites	1	2	3	4	5
A river section with adequate access for motorboats	1	2	3	4	5
A river section with adequate access for canoes, kayaks, and inner tubes	1	2	3	4	5
A river section with adequate trail access (for hiking, biking, running, etc.)	1	2	3	4	5
Riverbanks lined with trash	1	2	3	4	5
Adequate on site facilities such as restrooms, shelters, picnic facilities	1	2	3	4	5
A river section near restaurants and/or shopping	1	2	3	4	5
A river section with boat rental and/or shuttle service nearby	1	2	3	4	5
Access points are located in cities or small towns	1	2	3	4	5
Access points are located in rural areas	1	2	3	4	5
Stream segment in very remote rural settings	1	2	3	4	5
Other(please specify)_____	1	2	3	4	5
Other (please specify)_____	1	2	3	4	5

Information on you and other members of your household will help us better understand how household characteristics affect an individual's use of Iowa rivers and streams and attitudes towards changes in them. It will also help us to determine how representative our sample is of the state of Iowa. All of your answers are strictly confidential. The information will only be used to report comparisons among groups of people. We will never identify individuals or households with their responses. Please be as complete in your answers as possible. Thank you.

8. What is your age?

- ☐ Under 18 ☐ 26 – 34 ☐ 50 - 59 ☐ 76 +
☐ 18 – 25 ☐ 35 – 49 ☐ 60 - 75

9. Are you

- ☐ male ☐ female

10. What is the highest level of schooling that you have completed? (Please check only one)

- ☐ Some high school or less ☐ Some college or trade/vocational school ☐ Advanced degree
☐ High school graduate ☐ College graduate

11. How many adults (including yourself) live in your household? _____

12. How many children (18 or under) live in your household? _____

13. What is your current employment status?

- ☐ full time ☐ part time ☐ student ☐ unemployed ☐ retired

14. What is your total household income (before taxes) for 2009?

- ☐ Under \$10,000 ☐ \$25,000-\$29,999 ☐ \$50,000-\$59,999 ☐ \$125,000-\$149,999
☐ \$10,000-\$14,999 ☐ \$30,000-\$34,999 ☐ \$60,000-\$74,999 ☐ Over \$150,000
☐ \$15,000-\$19,999 ☐ \$35,000-\$39,999 ☐ \$75,000-\$99,999
☐ \$20,000-\$24,999 ☐ \$40,000-\$49,999 ☐ \$100,000-\$124,999

15. Do you own a boat or did you rent one in 2009?

	Canoe	Kayak	Motorboat	Fishing boat	Other
Own	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Rent	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Thank you for your participation in this survey. After completion, surveys should be returned to:
